

Smarter Orthodontics Starts Here

DentalMonitoring App

What is it?

DentalMonitoring is the industry's most advanced remote monitoring platform, and we are now offering this technology to patients who meet the dental criteria.

How does it work?

If you choose to participate in this service, you will be provided with a scanning device that attaches to your phone. You will scan your mouth weekly or when prompted, which allows our doctors to track your orthodontic treatment more frequently. You will be able to communicate with our team through the app, so you feel connected and understand the state of your treatment and oral health.

Benefits

- **Early Detection:** DentalMonitoring allows us to detect dental and orthodontic issues early, such as poor oral hygiene, gum inflammation, broken brackets, wires issues, and aligner tracking.
- **Efficiency:** Scans track orthodontic progress, which leads to a more tailored treatment, it can provide quicker orthodontic completion and reduced in-office visits.
- **Better Communication:** Your orthodontist can access scans and photos to monitor progress, which can improve communication and collaboration.
